

Guidelines for Research Project and Seminar

1 Introduction

Research Projects offer students the opportunity to do original research or advanced scholarship in a field relevant to their study and of particular interest to them. Students will conduct an extensive research project, which they will then analyse in a formal dissertation.

Students may be encouraged to develop research-based projects that have external contacts/clients and that allow students to best further their portfolio and employability. This module represents the culmination of their studies preparing students for their postgraduate award and for further study or for employment beyond university.

2 Module Aims

Masters' degrees are awarded to students who have demonstrated:

- a systematic understanding of knowledge, and a critical awareness of current problems and/or new insights, much of which is at, or informed by, the forefront of their academic discipline, field of study, or area of professional practice;
- a comprehensive understanding of techniques applicable to their own research or advanced scholarship;
- originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in the discipline;
- conceptual understanding that enables the student:
 - to evaluate critically current research and advanced scholarship in the discipline; and
 - to evaluate methodologies and develop critiques of them and, where appropriate, to propose new hypotheses.

3 Module Learning Outcomes

On completion of this module, student should be able to:

1. Agree realistic and coherent objectives for a project requiring research and advanced scholarship in a subject area that is appropriate to the student's award
2. Systematically and effectively apply appropriate research methods in pursuit of a clear and coherent set of objectives.
3. Demonstrate a rigorous appreciation of the strengths and limitations of the research methods, tools and/or techniques employed and provide a substantial account of the academic, ethical and technical issues encountered in the research.
4. Critically evaluate the evidence collected as part of the research process and reflect upon the relationship between evidence of different types and/or from different sources.

5. Provide and justify a balanced set of conclusions that draw upon the evidence collected, address the particular research questions within the student's chosen field of study and relate them to existing knowledge or state of the art.
6. Create a finished piece of work that is accessible to an academic audience (and, if relevant, to a professional audience), which complies with previously defined criteria, and which complies with the IEEE referencing system.

4 Module Learning Activities

University and corresponding colleges may conduct induction classes on title selection, literature reviews, research methodologies and referencing systems/ tools for real world problems. Students are expected to use the knowledge and skills gained from the Research Methodology class and above-mentioned induction classes and put them to fruition in their own research project. Students will carry out their project and dissertation work under the direction of an academic supervisor. And thus, they are advised to maintain regular contact with their supervisor.

5 Supervisors

Students have a significant level of freedom in steering their dissertation (indeed, one of the objectives is to allow students to demonstrate such management skills). However, their supervisor will seek to ensure that unprofitable or intractable avenues are not pursued and that students are keeping to targets. Ultimately it is their responsibility to meet the required learning outcomes.

Students should meet with this supervisor at least four times during their studies. It is strongly advised to arrange a meeting involving both supervisors, early in the dissertation process, with a view to getting agreement from all parties that their proposed project is a sound one, appropriate to Masters Level.

Student shall submit one proposal of their research project to university or related school/ college. University or c related school/ college will approve, disapprove or suggest modification in submitted proposal and hence allocate supervisors.

Students are expected to:

- *Be self-motivated and independent learners completing research tasks independently*
- *Arrange and attend regular meetings with their supervisors to discuss progress and research ideas and issues*

6 Ethics

An important reminder from the Research project: students must have already completed an ethics release form, via the online system, and had it approved. Students should consider any ethical considerations carefully and discuss them with their supervisor. It may be that their project cannot go ahead if it impacts on other people. Ethical approval must be confirmed before students can commence any data collection. If their project changes significantly from that which approval was awarded students must submit a new form for approval.

7 Research Project types:

There are essentially two types of research project:

- A project based around a product, e.g. some software, hardware or creative artefact. If students opt for this type of project, it is important to ensure that their product is sufficiently challenging for a Masters award, and that students incorporate a substantial research element into their project; it needs to go beyond merely a development effort.
- A project based around an explorative study, e.g. conducting literatures review, finding gaps and proposing new frameworks, for example: framework for interoperability in digital wallets.

8 Documentation guidelines

This guideline is a guide for the preparation of an acceptable research project manuscript. Moreover, this guideline aims at maintaining uniformity in the thesis being submitted. Hence, all the students are advised to strictly follow the guidelines right from the submission of proposal of research project, draft for pre-defence and final submission. The research committee at university or respective school/college has all the rights to reject the manuscript upon a failure of the students to follow the guidelines.

8.1 Documentation format for Proposal

1. Order and content of the thesis proposal

1.1 Cover page/Title in preliminaries

1.1.1 Cover page or title page

It should contain the title of research proposal, student's name, University registration number, name of school/college/university, and date/year of submission.

1.1.2 Table of contents (with titles and page numbers)

This page provides information to the readers about the composition of the whole proposal as well as location of different sections and sub-sections in the thesis. Hence, this section should include the chapter, section and sub-section headings with appropriate page number (See Appendix 10).

1.1.3 List of tables (with titles and page numbers)

This page provides information to the readers about the details of the tables provided in the thesis along with their location (page numbers). Numbering of tables should reflect the chapter the table belongs to (See Appendix 11). e.g. *Table*

3.4 refers to fourth table of chapter 3.

1.1.4 List of figures (with titles and page numbers)

This page provides information to the readers about the

details of the figures provided in the thesis along with their location (page numbers). Numbering of figures should reflect the chapter the figure belongs to (See Appendix 12). e.g. *Fig. 3.4 refers to fourth figure of chapter 3.*

1.1.5 Abbreviations/Acronyms

This section provides the list of abbreviation and acronyms used in the thesis alongwith their details. It should be presented in alphabetical order (See Appendix 15).

1.1.6 Units and conversions

This section provides the list of units and conversions, if applicable, used in the thesis along with their details. It should be presented in alphabetical order. (Similaras Appendix 15)

1.2 INTRODUCTION

This chapter should discuss the background of the research issues being dealt, statement of the problem, research questions, and research objectives, significance/rationale of the study, and scope and limitation of the study. Introduction must revolve around the research issue to be dealt by the research project.

1.2.1 Background

Brief background of the issues should be discussed under the background section. It should be done in the form of brief literature review of related literatures, which is essential to build statement of the problem, research question, and research objectives in the later part of INTRODUCTION chapter.

1.2.2 Statement of the problem

This section must indicate what the problem is, and why and how it is a problem. Similarly, necessity to conduct the research should be discussed. It should be supported by data or evidences. This section should be well connected with background section and as brief as possible.

1.2.3 Research questions

Based on the statement of the problem research question should be formulated. Research questions should clearly state what type of answers the research is looking for.

1.2.4 Research objectives

This section should clearly mention the overall and specific goal of the research. Usually objective is presented as general objective and specific objectives. The general objective of research should be only one and should be in line with the title. To meet the general objective, several specific objectives could be set. Specific objectives should be in line with research questions and are more or less equal to numbers of research questions.

1.2.5 Significance/rationale of the study

The importance of the proposal research should be stated in this section, in terms of potential beneficiaries and the way they will be benefitted. The section should focus on justifying the topic of proposed research.

1.1.1 Limitation and scope of the study

Researcher should write clearly the limitation and scope of the proposed research.

1.3 LITERATURE REVIEW

Literature review is basically a survey of published materials on the topic of the interest authored by accredited scholars and researchers. It is quite important to uncover what is already known in the body of knowledge prior to initiating any research. Hence, it is a crucial endeavor for any academic research in theoretical and conceptual progress. Thus, it helps to situate your research in the context of what is already known about the topic and find the gap that the research will bridge. It is encouraged to **review critically** at **least 10 relevant articles** published in peer-reviewed journals during the literature review process.

1.4 METHODOLOGY

This chapter includes the discussion about the way the research will be conducted to meet the stated objectives. The methodology should be summarized in the form of block diagram/flowchart. Selected methodology should be discussed in details along with the justification of selecting the methodology. It should include research design (applied research, experimental research, exploratory research), research approaches (qualitative, quantitative), study area, study population, feature selection (and selection methods), data size, data source, methods of data collection,

data augmentation, evaluation methods, specific computer programs to be used or developed and data analysis approaches and tools.

1.5 TENTATIVE TIME SCHEDULE

The research proposal should include the proposed time schedule of respective activities.

1.6 BUDGET (If applicable)

The research proposal should include the tentative budget (optional) for the research. The budget should be allocated in respective activities.

1.7 REFERENCE

The arguments in the thesis should be supported by proper evidences. This needs to be done by referring to earlier publications such as patents, journals, books, reports, thesis and other materials. Hence, referencing gives credit to the authors or organizations for using their work in your thesis. It provides the reader with evidence of the breadth and depth of researchers reading and enables readers to locate the references easily. It is strongly recommended to follow the IEEE referencing format for the documents submitted to university.

Note: The students are strongly advised to familiarize themselves with the concept of plagiarism and should maintain plagiarism under 20%.

8.2 Documentation format for final submission

1. Order and content of the thesis

1.1 Pretext (Preliminary pages)–It should contain the following headings:

1.1.1 Cover page:

This page should give information about title of the thesis, name of author, name of the institute, and month and year of thesis completion. For the convenience to easily locate the thesis while staked, information on title, author and year of graduation must appear in the side of bound thesis. Information on font type, font size, font color, page margin and spacing between the lines is provided in the sample supplied as Appendix 1 and 2.

1.1.2 Title page:

Pagination should start from the title page, but should not appear in the page. All the information regarding this page is provided in Appendix 3.

1.1.3 Dedication (Optional):

This is an optional page. Dedication should be brief and centered from all the ends on the page. No heading is used in the dedication page and number of this page should be “ii”. Dedication is not listed in the “Table of contents”. (See Appendix 4).

1.1.4 Declaration:

This section of thesis declares that your study is based on original research works, and related works on the topic being used in the thesis is duly acknowledged through proper citation and referencing. In addition, this section is also meant for taking responsibility by the student for any error and authenticity of the data used in the thesis (See Appendix 5). In the case there is dedication, pagination of this page would be “iii” otherwise it should be “ii”.

1.1.5 Recommendation

This is the recommendation to be made by the supervisor. It mentions that you have prepared and submitted the thesis through the supervision of your supervisor (See Appendix 6). By signing this page, It is expected supervisor assures the quality of your thesis to be sufficient enough to meet the requirement set by the University.

1.1.6 Certificate

This page certifies that you have successfully completed the thesis work and eligible for acceptance. This page is to be signed by the external examiner, supervisor (if there is co-supervisor, signed by co-supervisor as well) and Head of Department/Director/Principal of faculty/School/College (See Appendix 7). This page should be printed in college/school letter head with college/school official stamp

1.1.1 Acknowledgements

This section is to express gratitude to all the individuals or the institutions that helped you to successfully complete your research. Usually, supervisor and co- supervisor are acknowledged first followed by funding agencies, if any. Similarly, professors, classmates/ friends, staffs of the school/ college/ institute/ university, from whom you received guidance/suggestions/support, should also be acknowledged. In the case you have conducted field survey respondents should be acknowledged for their time consumed during the field survey as well as the information. You can also acknowledge your family members and relatives for their patience, support, dream whatsoever (See Appendix 8).

1.1.2 Abbreviations/Acronyms

This section provides the list of abbreviation and acronyms used in the thesis along with their details. It should be presented in alphabetical order (See Appendix 15).

1.1.3 Units and conversions

This section provides the list of units and conversions, if applicable, used in the thesis along with their details. It should be presented in alphabetical order (Similar to Appendix 15).

1.1.4 Abstract

Abstract is compulsory. The heading **ABSTRACT**, in capital letters and bold font should be centered between the left and right margins, without punctuating or underlining. Four blank spaces should be maintained before starting the paragraph (See Appendix 9). Abstract should present a succinct account of the research. It should contain a statement of the research problem, methods, results, discussions, conclusions and recommendation, but in brief, limited within a page or two pages. Hence, it should be a concise reflection of the entire study so that it functions chiefly as a guide for students and scholars surveying research in their field. It should be written in simple English. Internal heading, citation(s), mathematical formula(s), diagrams/figure(s), table(s), and other illustrative material(s) must be avoided in abstract. The abstract should be concise within 300-350 words limit.

2. Keywords:

3-7 keywords based on the research should be kept in the page of abstract below the main text of the abstract.

2.1.1 Table of contents (with title and page number)

This page provides information to the readers about the composition of the whole thesis as well as location of different sections and sub-sections in the thesis. Hence, this section of the thesis should include the chapter, section and sub-section headings with appropriate page number (See Appendix 10). It should be placed next to the abstract sheet

1.1.1 List of tables (with title and page number)

This page provides information to the readers about the details of the tables provided in the thesis along with their location (page numbers). Numbering of tables should reflect on which chapter the table belongs to (See Appendix 11). e.g. *Table 3.4 refers to fourth table of chapter 3.*

1.1.2 List of figures (with title and page number)

This page provides information to the readers about the details of the figures provided in the thesis along with their location (page numbers). Numbering of figures should reflect on which chapter the figure belongs to (See Appendix 12).

e.g. *Fig. 3.4 refers to fourth figure of chapter 3.*

1.1.3 List of plates/pictures (with titles and page number)

This page provides information to the readers about the details of the plates/pictures provided in the thesis along with their location (page numbers). Numbering of plates/pictures should reflect on which chapter the plate/picture belongs to (See Appendix 13). e.g. *Plate 3.4 refers to fourth plate of chapter 3.*

1.1.4 List of appendices (with titles and page number)

This page provides information to the readers about the details of the appendices provided in the thesis along with their location (page numbers). Its numbering can be done in normal sequence (See Appendix 14).

2. Chapter 1 INTRODUCTION

This chapter should discuss the background of the research issues being dealt, statement of the problem, research questions, research objectives, significance/rationale of the study, and scope and limitation of the study. Introduction must revolve around the central research issue.

1.1 Background

Brief background of the issues should be discussed under the background section. It should be done in the form of brief literature review of related literatures, which is essential to build statement of the problem, research question, and research objectives in the later part of INTRODUCTION chapter.

1.2 Statement of the problem

This section must indicate what the problem is, why and how it is a problem. Similarly, necessity to conduct the research should also be discussed. It should be supported by data or evidences. This section should be well connected with background section and as brief as possible.

1.3 Research questions

Based on the statement of the problem research question should be formulated. Research questions should clearly state what type of answers the research is looking for.

1.4 Research objectives

This section should clearly mention what you want to achieve from the research. Usually, objective is presented as general objective and specific objectives. The general objective of research should be only one and should be in line with the title. To meet the general objective, several specific objectives could be set. Specific objectives should be in line with research questions and are more or less equal in numbers of research questions.

1.5 Significance/Rationale of the study

The importance of the proposal research should be stated in this section, in terms of potential beneficiaries & the way they will be benefitted. The section should focus on justifying the topic of the proposed research.

CHAPTER 2 LITERATURE REVIEW

Literature review is basically a survey of published materials on the topic of the interest authored by accredited scholars and researchers. It is quite important to uncover what is already known in the body of knowledge prior to initiating any research (Hart, 1998). Hence, it is a crucial endeavor for any academic research in theoretical and conceptual progress (Shaw, 1995 and, Webster and Watson, 2002). Thus, it helps to situate your research in the context of what is already known about the topic and find the gap that your research will bridge.

Chapter 3: METHODOLOGY

This chapter includes the discussion about the way you conducted your thesis research in order to meet the objectives. The methodology should be summarized in the form of block diagram /flowchart. Selected methodology should be discussed in details along with the justification of selecting the methodology. Each method used in the thesis should be directly and specifically linked with the research objectives. It should include research design, research approaches study area, study population, sample selection (sample selection methods), sample size, methods of data collection (Key Informant Interview, Focused Group Discussion, questionnaire survey, modeling, observation, measurement) and data analysis approach & tools.

CHAPTER 4 : RESULTS AND DISCUSSION

This section should present the findings of the study in logical sequences in line with the specific objectives. Presentation of data and facts should be explained regarding plausibility and compared with data from similar studies.

CHAPTER 5: CONCLUSION AND RECOMMENDATIONS

Conclusion is an integration of various issues covered in the body of the thesis. Conclusion includes noting any implications resulting from the discussion and making policy recommendation as well as the need for further research. Hence, the conclusion should be a logical ending to what has been previously discussed. It must

pull together all parts of the argument and refer the reader back to the focus you have outlined in your introduction and to the central topic. Never present any new information in this section and never make generic conclusion which are not supported by the data/information in the text of the thesis. Thus, conclusion and recommendation of the study must be limited within the scope of the research.

REFERENCE

The arguments in the thesis should be supported by proper evidences. This needs to be done by referring to earlier publications such as patents, journals, books, reports, thesis and other materials. Hence, referencing gives credit to the authors or organizations for using their work in your thesis. It provides the reader with evidence of the breadth and depth of researchers reading and enables readers to locate the references easily. It is strongly recommended to follow the *IEEE referencing* format for the thesis submitted to University.

Note: The students are strongly advised to familiarize themselves with the concept of plagiarism and should be below 20%.

9 Assessment Summary

This module is assessed in two components. **Please note that ALL components MUST be submitted for a pass to be awarded.**

If students do not attend the scheduled presentation for component 1 of the assessment, students will be given one further opportunity at a time. A 5% penalty will be applied to their mark for late submission. If students miss the late presentation, their mark for component 1 will be recorded as non-Submission and students will fail the module.

Assessment	Weighting:	Assessment method
1.Proposal submission	30%	PROPOSAL & presentation of their Proposal
2. Final submission	70%	Final report and presentation

10 Assessment Component 1: Proposal submission/ presentation: Marking Criteria (30% of total mark)

	Distinction (70%+)	Merit (60-69%)	Pass (40-59%)	Fail (less than 40%)
Introduction & background	Has provided a brief overview and rationale on the proposed work to an excellent standard using relevant literature	Has provided a brief overview and rationale on the proposed work to a very good standard using relevant literature.	Has provided a brief overview and rationale on the proposed work to a sufficient standard using some literature.	Has provided a very weak/no overview and/or rationale with little/no supporting literature.
Statement of problem & Objectives	Clearly demonstrated in full on the proposed work.	Included somewhere on the Proposal in full	Included in part on the Proposal	Not included on the Proposal
Novel methodology & Methods Q&A	The student has demonstrated a sound justification , on methodology adopted and has carried out the methodology in an insightful and professional manner, demonstrating originality and a self-critical evaluation of effectiveness.	The student has demonstrated a sound justification on methodology adopted and has carried out the methodology effectively .	The student has demonstrated some justification on methodology adopted and has carried out the methodology to a reasonable level .	Adopts an inappropriate and poorly justified methodology, cannot clearly explain.
Expected outcome	An overview of the KEY primary results has been included and related to the literature to an excellent extent on the Proposal, and innovative suggestions have been made regarding how the work could be developed.	An overview of the KEY primary results has been included and related to the literature to a good extent on the Proposal, and some suggestions have been made regarding how the work could be developed.	An overview of the KEY primary results has been included and related to the literature to some extent on the Proposal , and limited suggestions have been made regarding how the work could be developed.	An overview of the KEY primary data has not been included , or included to an insufficient standard and not related to existing theory on the Proposal , and there are no/minimum suggestions for further development.
Conclusion / Summary	The student has provided an excellent summary on the Proposal of the research accompanied by an excellent critique & evaluation of the work conducted (methods and/or prototype/product).	The student has provided a good summary on the Proposal of the research accompanied by some critique & evaluation of the work conducted (methods and/or prototype/product).	The student has provided a summary on the Proposal of the research accompanied by limited critique & evaluation of the work conducted (methods and/or prototype/product).	The student has not provided a summary on the Proposal of the research and cannot provide a critique or evaluation of the work conducted (methods and/or prototype/product).
Ethical issues PROPOSAL	Has provided an overview of the KEY ethical considerations of the research to an excellent standard and has incorporated good practice if appropriate	Has provided an overview of the KEY ethical considerations of the research to some extent with some incorporation of good practice if appropriate	Has provided an overview of the KEY ethical considerations of the research to a reasonable level	Ethical considerations have not been included on the Proposal .
Presentation and general comments PROPOSAL and Q&A	The Q&A is very clear and has been delivered to an excellent standard within the specified time limit. Proposal has excellent clear, concise information, visually/aesthetically appealing not text heavy.	The Q&A is clear and has been delivered to a good standard within the specified time limit. Proposal has very good clear, concise information, relatively visually/aesthetically appealing not too text heavy.	The Q&A is acceptable but full information has not been delivered within the specified time limit. Proposal has good clear information, sufficient visually a little text heavy.	The Q&A is unclear and has not been delivered within the specified time limit. Proposal not visually appealing, has far too much text and is not clear.

11 Assessment Details: Final submission and presentation (70% of marks)

	Distinction (70%+)	Merit (60-69%)	Pass (40-59%)	Fail (less than 40%)
Overall and Introduction	The problem addressed in the research is a significant technical or academic one, and has been shown to be so by the student. The Dissertation could form the basis for published work (very high academic quality piece of written work) .	The problem addressed in the research is a significant technical or academic one, and has been shown to be so by the student. The work would need substantial development were it to form the basis for published work.	The problem addressed in the research is a significant technical or academic one, and has been shown to be so by the student. The work would need major revision were it to form the basis for published work.	Does not address a sufficiently challenging problem . The work is not publishable material.
Aim, Objectives, and Rationale / statement of problem	The aim and research objectives (questions or hypotheses) are very clear . Has provided an excellent rationale for the research.	The aim and research objectives (questions or hypotheses) are very clear . Has provided a very good rationale for the research.	The aim and research objectives (questions or hypotheses) are clear . Has provided a sufficiently good rationale for the research.	The aim and research objectives (questions or hypotheses) are very vague . Has provided a very weak rationale for the research.
Literature Survey	In addressing the problem, the student has evidenced a critical understanding of the relevant research literature. Have extensively conducted critical analysis and synthesis for the 15 or more literatures review. Most literature surveyed is up to date .	In addressing the problem, the student has evidenced an understanding of the relevant research literature, albeit with limited critique . Have conducted some critical analysis and synthesis for 10 or more literatures review. Some literature survey is up to date .	In addressing the problem, the student has evidenced some understanding of relevant literature, albeit largely descriptive . Has conducted very little critical analysis and synthesis for 5 or more literature review. Most literature surveyed is dated .	In addressing the problem, the student has evidenced very limited understanding of relevant literature. Has conducted no critical analysis and synthesis for less than 5 literature review. All literature surveyed is dated .
Methodology	The student has demonstrated a sound justification for the methodology adopted and has carried out the methodology in an insightful and professional manner, demonstrating originality and a self-critical evaluation of effectiveness.	The student has demonstrated a sound justification for the methodology adopted and has carried out the methodology effectively .	The student has demonstrated some justification for the methodology adopted and has carried out the methodology effectively .	Adopts an inappropriate and poorly justified methodology.
Research Outcome, and Discussion	All the results from the research have been mapped precisely to the research objectives (questions, hypotheses or prototype/product). The student relates the results to the literature and makes innovative suggestions regarding how the work could be developed.	Almost all of the results from the research have been mapped to the research objectives (questions, hypotheses or prototype/product). The student relates the results to the literature and makes some suggestions regarding how the work could be developed.	Some of the results from the research have been mapped to the research objectives (questions, hypotheses or prototype/product). The student relates the results to the literature and makes very few suggestions regarding how the work could be developed.	The results from the research have not been mapped to the research objectives (questions, hypotheses or prototype/product). The student does not relate any results found to existing theory and fails to make reasoned suggestions for further development.
Contribution and conclusion	The student has provided an excellent summary of the research accompanied by an excellent critique & evaluation of the work conducted (methods and/or prototype/product). It also includes his/her unique contribution , excellent recommendations for further research.	The student has provided a very good summary of the research accompanied by some critique & evaluation of the work conducted (methods and/or prototype/product). It also includes his/her unique contribution , good recommendations for further research.	The student has provided a summary of the research accompanied by limited critique & evaluation of the work conducted (methods and/or prototype/product). It also includes weak recommendations for further research.	The student has not provided a summary of the research and is not accompanied by a critique or evaluation of the work conducted (methods and/or prototype/product). It does not include any recommendation for further research.
References	All the references are in IEEE Style Referencing Style	Almost all the references are in IEEE Style Referencing Style	Some the references are in IEEE Style Referencing Style	None of the references is in IEEE Style Referencing Style

Abstract—This electronic document is a “live” template and already defines the components of your paper [title, text, heads, etc.] in its style sheet. ***CRITICAL: Do Not Use Symbols, Special Characters, Footnotes, or Math in Paper Title or Abstract.** (Abstract)

Keywords—*component, formatting, style, styling, insert (key words)*

• INTRODUCTION (HEADING 1)

This template, modified in MS Word 2007 and saved as a “Word 97-2003 Document” for the PC, provides authors with most of the formatting specifications needed for preparing electronic versions of their papers. All standard paper components have been specified for three reasons: (1) ease of use when formatting individual papers, (2) automatic compliance to electronic requirements that facilitate the concurrent or later production of electronic products, and (3) conformity of style throughout a conference proceedings. Margins, column widths, line spacing, and type styles are built-in; examples of the type styles are provided throughout this document and are identified in italic type, within parentheses, following the example. Some components, such as multi-leveled equations, graphics, and tables are not prescribed, although the various table text styles are provided. The formatter will need to create these components, incorporating the applicable criteria that follow.

• EASE OF USE

○ Selecting a Template (Heading 2)

First, confirm that you have the correct template for your paper size. This template has been tailored for output on the A4 paper size. If you are using US letter-sized paper, please close this file and download the Microsoft Word, Letter file.

○ Maintaining the Integrity of the Specifications

The template is used to format your paper and style the text. All margins, column widths, line spaces, and text fonts are prescribed; please do not alter them. You may note peculiarities. For example, the head margin in this template measures proportionately more than is customary. This

measurement and others are deliberate, using specifications that anticipate your paper as one part of the entire proceedings, and not as an independent document. Please do not revise any of the current designations.

• PREPARE YOUR PAPER BEFORE STYLING

Before you begin to format your paper, first write and save the content as a separate text file. Complete all content and organizational editing before formatting. Please note sections A-D below for more information on proofreading, spelling and grammar.

Keep your text and graphic files separate until after the text has been formatted and styled. Do not use hard tabs, and limit use of hard returns to only one return at the end of a paragraph. Do not add any kind of pagination anywhere in the paper. Do not number text heads-the template will do that for you.

○ Abbreviations and Acronyms

Define abbreviations and acronyms the first time they are used in the text, even after they have been defined in the abstract. Abbreviations such as IEEE, SI, MKS, CGS, sc, dc, and rms do not have to be defined. Do not use abbreviations in the title or heads unless they are unavoidable.

○ Units

Use either SI (MKS) or CGS as primary units. (SI units are encouraged.) English units may be used as secondary units (in parentheses). An exception would be the use of English units as identifiers in trade, such as “3.5-inch disk drive”.

Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity that you use in an equation.

Do not mix complete spellings and abbreviations of units: “Wb/m²” or “webers per square meter”, not “webers/m²”. Spell out units when they appear in text: “. . . a few henries”, not “. . . a few H”.

Identify applicable funding agency here. If none, delete this text box.

Use a zero before decimal points: “0.25”, not “.25”. Use “cm3”, not “cc”. (*bullet list*)

○ *Equations*

The equations are an exception to the prescribed specifications of this template. You will need to determine whether or not your equation should be typed using either the Times New Roman or the Symbol font (please no other font). To create multileveled equations, it may be necessary to treat the equation as a graphic and insert it into the text after your paper is styled.

Number equations consecutively. Equation numbers, within parentheses, are to position flush right, as in (1), using a right tab stop. To make your equations more compact, you may use the solidus (/), the exp function, or appropriate exponents. Italicize Roman symbols for quantities and variables, but not Greek symbols. Use a long dash rather than a hyphen for a minus sign. Punctuate equations with commas or periods when they are part of a sentence, as in:

$$a \square \square \square b \square \square \square \square \square \square \square \square$$

Note that the equation is centered using a center tab stop. Be sure that the symbols in your equation have been defined before or immediately following the equation. Use “(1)”, not “Eq. (1)” or “equation (1)”, except at the beginning of a sentence: “Equation (1) is . . .”

○ *Some Common Mistakes*

The word “data” is plural, not singular.

The subscript for the permeability of vacuum $\square_0$, and other common scientific constants, is zero with subscript formatting, not a lowercase letter “o”.

In American English, commas, semicolons, periods, question and exclamation marks are located within quotation marks only when a complete thought or name is cited, such as a title or full quotation. When quotation marks are used, instead of a bold or italic typeface, to highlight a word or phrase, punctuation should appear outside of the quotation marks. A parenthetical phrase or statement at the end of a sentence is punctuated outside of the closing parenthesis (like this). (A parenthetical sentence is punctuated within the parentheses.)

A graph within a graph is an “inset”, not an “insert”. The word alternatively is preferred to the word “alternately” (unless you really mean something that alternates).

Do not use the word “essentially” to mean “approximately” or “effectively”.

In your paper title, if the words “that uses” can accurately replace the word “using”, capitalize the “u”; if not, keep using lower-cased.

Be aware of the different meanings of the homophones “affect” and “effect”, “complement” and “compliment”, “discreet” and “discrete”, “principal” and “principle”.

Do not confuse “imply” and “infer”.

The prefix “non” is not a word; it should be joined to the word it modifies, usually without a hyphen.

There is no period after the “et” in the Latin abbreviation “et al.”.

The abbreviation “i.e.” means “that is”, and the abbreviation “e.g.” means “for example”.

An excellent style manual for science writers is [7].

● *USING THE TEMPLATE*

After the text edit has been completed, the paper is ready for the template. Duplicate the template file by using the Save As command, and use the naming convention prescribed by your conference for the name of your paper. In this newly created file, highlight all of the contents and import your prepared text file. You are now ready to style your paper; use the scroll down window on the left of the MS Word Formatting toolbar.

○ *Authors and Affiliations*

The template is designed for, but not limited to, six authors. A minimum of one author is required for all conference articles. Author names should be listed starting from left to right and then moving down to the next line. This is the author sequence that will be used in future citations and by indexing services. Names should not be listed in columns nor group by affiliation. Please keep your affiliations as succinct as possible (for example, do not differentiate among departments of the same organization).

▪ *For papers with more than six authors:* Add author names horizontally, moving to a third row if needed for more than 8 authors.

For papers with less than six authors: To change the default, adjust the template as follows.

● *Selection:* Highlight all author and affiliation lines.

Change number of columns: Select the Columns icon from the MS Word Standard toolbar and then select the correct number of columns from the selection palette.

● *Deletion:* Delete the author and affiliation lines for the extra authors.

○ *Identify the Headings*

Headings, or heads, are organizational devices that guide the reader through your paper. There are two types: component heads and text heads.

Component heads identify the different components of your paper and are not topically subordinate to each other. Examples include Acknowledgments and References and, for these, the correct style to use is “Heading 5”. Use “figure caption” for your Figure captions, and “table head” for your table title. Run-in heads, such as “Abstract”, will require you to apply a style (in this case, italic) in addition to the style provided by the drop down menu to differentiate the head from the text.

Text heads organize the topics on a relational, hierarchical basis. For example, the paper title is the primary text head because all subsequent material relates and elaborates on this one topic. If there are two or more sub-topics, the next level head (uppercase Roman numerals) should be used and, conversely, if there are not at least two sub-topics, then no subheads should be introduced. Styles named “Heading 1”, “Heading 2”, “Heading 3”, and “Heading 4” are prescribed.

○ *Figures and Tables*

- *Positioning Figures and Tables:* Place figures and tables at the top and bottom of columns. Avoid placing them in the middle of columns. Large figures and tables may span across both columns. Figure captions should be below the figures; table heads should appear above the tables. Insert figures and tables after they are cited in the text. Use the abbreviation “Fig. 1”, even at the beginning of a sentence.

TABLE TYPE STYLES

Table Head	Table Column Head		
	Table column subhead	Subhead	Subhead
copy	More table copy ^a		

Sample of a Table footnote. (Table footnote)

Example of a figure caption. (figure caption)

Figure Labels: Use 8 point Times New Roman for Figure labels. Use words rather than symbols or abbreviations when writing Figure axis labels to avoid confusing the reader. As an example, write the quantity “Magnetization”, or “Magnetization, M”, not just “M”. If including units in the label, present them within parentheses. Do not label axes only with units. In the example, write “Magnetization (A/m)” or “Magnetization {A[m(1)]}”, not just “A/m”. Do not label axes with a ratio of quantities and units. For example, write “Temperature (K)”, not “Temperature/K”.

- **ACKNOWLEDGMENT (Heading 5)**

The preferred spelling of the word “acknowledgment” in America is without an “e” after the “g”. Avoid the stilted expression “one of us (R. B. G.) thanks ...”. Instead, try “R. B. G. thanks...”. Put sponsor acknowledgments in the unnumbered footnote on the first page.

- **REFERENCES**

The template will number citations consecutively within brackets [1]. The sentence punctuation follows the bracket [2]. Refer simply to the reference number, as in [3]—do not use “Ref. [3]” or “reference [3]” except at the beginning of a sentence: “Reference [3] was the first ...”

Number footnotes separately in superscripts. Place the actual footnote at the bottom of the column in which it was cited. Do not put footnotes in the abstract or reference list. Use letters for table footnotes.

Unless there are six authors or more give all authors’ names; do not use “et al.”. Papers that have not been published, even if they have been submitted for publication, should be cited as “unpublished” [4]. Papers that have been accepted for publication should be cited as “in press” [5]. Capitalize only the first word in a paper title, except for proper nouns and element symbols.

For papers published in translation journals, please give the English citation first, followed by the original foreign-language citation [6].

IEEE conference templates contain guidance text for composing and formatting conference papers. Please ensure that all template text is removed from your conference paper prior to submission to the conference. Failure to remove template text from your paper may result in your paper not being published.

We suggest that you use a text box to insert a graphic (which is ideally a 300 dpi TIFF or EPS file, with all fonts embedded) because, in an MSW document, this method is somewhat more stable than directly inserting a picture.

1. Formatting and requirements (except cover page, and title page)

Paper specifications:

Color: White

Size: 21 cm x 29.7 cm (A4)

Length of thesis: The length of the main body of report is expected in between 15,000 to 30,000 words. It is necessary to consult with the supervisor for the comprehensiveness of text, its flow and logics. Always incorporate only the important contexts, do not include the unreasonable and unnecessary text.

Calculation and measurement unit: SI unit

Equation: Equation should be typed using equation editor. It should be cited in the text as Eq. (n), where *n* represents specific equation number. e.g. Eq. (1), Eq. (2).

Figure: Figure should be cited in the text as Fig. (n), where *n* represents specific figure number. e.g. Fig. 1.1, Fig. 2.1. Figure caption should be provided below the figure and it should be left-aligned; pictures are considered as figures. The figures/tables from other sources should be reproduced and source mentioned along with caption inside bracket.

Table: Table should be cited in the text as Table *n*, where *n* represents specific table number. e.g. Table 1.1, Table 2.2. Table caption should be provided above the table and it should be left-aligned.

Language: American or British English (*Consistency should be maintained*). Any non- English word should be in *Italic*.

Main-text:

- a. Left margin: 3 cm (1.2 inches)
- b. Right margin: 2.5 cm (1 inch)
- c. Top margin: 2.5 cm (1 inch)
- d. Bottom margin: 2.5 cm (1 inch)
- e. Line spacing: 1.5
- f. Side: Front (Single side)
- g. Font size: 12 pts (can be adjusted in tables and figures)
- h. Font type: Times New Roman (even in tables and figures)
- i. Font style: Regular
- j. Font color: Black
- k. Breaking a word in two lines: Not allowed
- l. Corrections with fluid: Not allowed
- m. Overwriting: Not allowed
- n. Typing machine: Computer
- o. Printing quality: Laser

Make the font bold only when necessary as prescribed in the format.

Table 1.1	Population growth rate of Nepal	5
Table 2.1	Sales of cement in Nepal from 1978-2013	10
Table 4.1	Distribution of sample by socioeconomic variables	15
Table 4.2	Possession of house-by-house type	20
Table 4.3	Relation of income with possession of different types of house	21

Here, table number reflects distribution of tables among the chapters. For instance, Table 1.1 means table located in chapter 1. Similarly, Table 2.1 is table located in chapter 2 and Table 4.1, 4.2, and 4.3 are the tables located in Chapter 4. Table 4.1 is the first table of Chapter 4, and consequently 4.3 is the third table in Chapter 4. Similar, number applies for List of figures, and List of plates/pictures.
